

ProGene

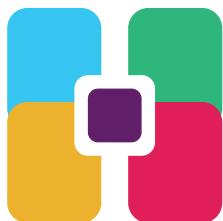

Design Style Guide

Brand identity, color tokens, typography, components, and usage guidelines for the ProGene proposal platform.

Version 1.0 · Updated June 2026

1. Brand

The ProGene mark is a colorful pinwheel of four overlapping document tiles — inspired by Slack's playful color block and built to read as 'documents in motion'. The four colors map to the four product pillars: clarity (blue), growth (green), value (yellow), and momentum (red).

Logo · Primary

Use on light backgrounds. Maintain clear space equal to one tile on all sides.
Minimum size: 24px.

2. Color System

All colors are defined as HSL tokens in `index.css` and consumed via Tailwind semantic classes. Never hardcode hex values in components.

3. Typography

ProGene uses **Inter** exclusively across the product — a clean, geometric sans-serif optimized for UI legibility. Headings use semibold (600) with tight tracking; body text uses regular (400).

The quick proposal jumps over

Display · 32pt · Hero headlines · -0.02em tracking

Body · 11pt · Default paragraph · leading 1.5

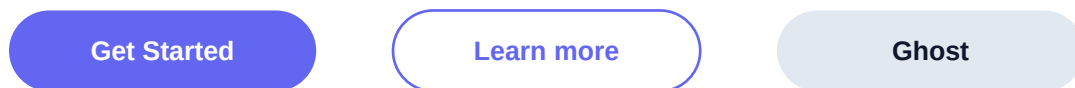

The quick proposal jumps over

Small · 9pt · Captions, meta, labels

4. Components

Buttons

Buttons use fully rounded pill shapes (border-radius: 9999px). Primary actions use the brand purple; secondary actions use outline style.

Cards

Cards use a 16px (rounded-2xl) radius, 1px border in --border, white surface, and subtle shadow. Hover: translateY(-4px) with elevated shadow.

Proposal Card

radius 16 · border 1px · shadow-sm · padding 24

Spacing Scale

Token	px	Use
xs	4	Inline gaps, icon padding
sm	8	Tight stacks
md	16	Default component padding
lg	24	Card padding, section gaps
xl	40	Between major sections
2xl	64	Hero vertical rhythm

Radius

sm 4px · md 8px · **lg 12px (default --radius)** · xl 16px · 2xl 24px · full 9999px (pills, avatars)

5. Voice & Tone

ProGene speaks like a senior freelancer who's seen it all: confident, concise, and warm. We never use jargon when a plain word will do. We celebrate the user's time — every word should save them some.

Do	Don't
Generate professional proposals in under 5 minutes.	Leverage our cutting-edge AI-driven synergies.
Pick a project type — we'll handle the rest.	Initialize the configuration workflow now.
Free forever for your first 3 proposals.	Limited-time complimentary tier access.

6. Implementation

All tokens live in `src/index.css` as HSL CSS custom properties, then are exposed through `tailwind.config.ts` as semantic Tailwind utilities.

```
:root {  
  --background: 216 33% 97%;  
  --foreground: 222 47% 11%;  
  --primary: 250 84% 60%;  
  --primary-foreground: 0 0% 100%;  
  --radius: 0.75rem;  
}
```

Always reach for semantic classes (`bg-primary`, `text-foreground`, `border-border`). Never write raw `bg-white` or hex values in component files — it breaks dark mode.
